

Computer Application Proposal

For the computer application project I am going to research DataCad 8. I used this application last quarter in Dennis Albery's ACSM 340 class. I believe that this program is very helpful for the formation of blueprints.

I have used this program for thirty or so hours. I realize that this is not a very long time, but I know quite a lot about the program. With my knowledge of the program, I feel that I can write a very in depth report on it. With the help of the Internet, I am sure to find a lot of information regarding DataCad 8. The Internet will help me find the pros and cons of the program, and help me come to a conclusion whether or not the program is useful.

DataCad 8 is a program that assists in forming detailed drawings for commercial or residential construction. Along with basic operations, this program has a long list of templates that are useful to the operator. The templates include anything from cars to trees to furniture and bathroom items. The program also has a list of macros, which assist the operator in roofing or framing the building.

This is just a brief description of DataCad 8. In my paper, I will detail the program more and get information from the Internet to help with the project.
