Position Available Student Research Assistant

The USDA-ARS Soil Drainage Research Unit, located in the Agricultural Engineering Bldg., is looking for a 2nd or 3rd-year FABE student to fill a student research assistant position in our Water Chemistry Lab beginning in May 2018. The position is available this summer (38 hours/week if not enrolled in summer credit hours, 28 if enrolled) and would preferably continue throughout the school year (10 hours/week).

The student would provide general assistance to the lab; receive and catalog field samples; perform sample filtration, basic wet chemistry techniques, turbidity and pH analyses; assist with lab dishwashing and weekly data entry; and occasionally assist with field sample collection.

Interested students should email a copy of their resume to Eric Fischer (fischer.427@osu.edu) by April 5.
