Creating Custom Hybrids in Precision Planting 20/20
Software Version 2016.3.1
4/23/2016
Starting from main operating screen select setup on right side of 20/20

Select corn hybrids (May do same procedure for other crops)
Type in full hybrid name in box

Then add a dash and then the treatment letter (A, B, C). Then select add as custom hybrid.
Type in hybrid details and then select Enter

Select desired rows (Most cases ALL)
Add all hybrids A, B, C, and E (etc.) and then select all rows when planting desired test block. While all hybrids may not be assigned select PROCEED.
